Industrial Maintenance Technician

Are you the kind of person who wants to understand why a machine has stopped, get it up and running again, and at the same time find a solution that prevents the problem from happening again?

Then you might be the technician we are looking for to join **Team Sort** in our production department.

We are looking for an experienced, hands-on **Industrial Technician or Automation Technician** who enjoys working close to both the machinery and the production environment. You have a solid technical understanding and practical experience with pneumatics, mechanics, troubleshooting, repairs, and planned maintenance.

At Topsil, you will work with equipment you will not find anywhere else. This can make troubleshooting more challenging, but also far more interesting, giving you plenty of opportunities to learn and continuously develop your technical skills. Our equipment ranges from highly precise measuring systems to large grinding machines, where getting your hands dirty is sometimes simply part of the job.

Your future team

You will become part of **Team Sort**, which currently consists of four technicians. Together, you are responsible for the operation and maintenance of more than 30 different machines and systems, covering a wide range of sizes, technologies, and functions.

We work closely with Production and our Process Owners, and sharing knowledge and ideas is a natural part of our daily work. Some tasks you will handle independently, while others require us to work together to find the best solution.

The atmosphere in the team is informal and friendly. There is room for professionalism, humour, and different personalities, and we believe it should be enjoyable to come to work and easy to ask one another for help.

Your responsibilities

Your primary responsibility will be to ensure that our production equipment operates reliably and efficiently.

Your tasks will include:

- Systematic troubleshooting of production equipment
- Repairing and resolving technical faults
- Servicing and maintaining a broad and varied range of machinery
- Working with pneumatics and mechanical systems
- Implementing improvements that increase equipment reliability and help prevent recurring faults
- Collaborating closely with your fellow technicians, Production, and Process Owners

We are also moving towards more systematic maintenance and **TPM (Total Productive Maintenance)**, as well as increased digitalisation and automation. You will therefore have the opportunity to help improve the way we work with our equipment and maintenance processes.

Who are you?

You may be a qualified Automation Technician, Industrial Technician, or have another relevant technical or mechanical background. However, a specific qualification is not essential. To us, your hands-on experience and technical understanding are more important than the title on your certificate.

Several years of experience in a similar technical role would therefore be a clear advantage.

Ideally, you have experience with:
•Pneumatics and mechanics
•Systematic troubleshooting
•Repairing production equipment
•Planned and preventive maintenance
•IT and digital tools
•Minor projects and continuous improvement activities
As a person, you take initiative and responsibility for your work. You are comfortable driving tasks forward independently, while also knowing when involving and sparring with colleagues will lead to a better solution.
We also value that you:
•Are engaged and take initiative
•Work in a structured and solution-oriented way
•Enjoy both independent work and teamwork
•Are curious about technology and eager to learn
•Look for opportunities to improve equipment rather than simply fixing the immediate fault
•Contribute positively to the team and to our collaboration with Production
You must be able to speak, read, write, and understand Danish. English skills are an advantage, as English is used in several areas of our business.

What we offer

You will join an exciting industrial company manufacturing a unique product, where your working day will offer a high degree of technical variety and plenty of opportunities to develop your skills.
We offer:
•Varied and technically challenging tasks
•Relevant training and opportunities for professional development
•Supportive and helpful colleagues
•A high degree of independence and influence in your daily work
•Pension scheme and health insurance
•An active employee association
•A workplace where different backgrounds, perspectives, and professional skills are respected

Interested?

We would love to hear from you.
Tell us a little about your technical experience, the equipment and systems you have worked with previously, and what motivates you in a working environment where troubleshooting, maintenance, and technical challenges are part of everyday life.

Contact

For further information, please contact **Team Leader Henrik Rytter** at **hry@gw-topsil.com**.
We review applications and invite candidates for interviews on an ongoing basis and are ready to move quickly when we find the right candidate.

About Topsil

Topsil is an innovative manufacturing company and a leading supplier of ultra-pure silicon to the global semiconductor industry. The company has customers and business partners worldwide and also collaborates internationally with universities and private organisations on research and development. [http://www...opsil.com/], [https://ww...ny/topsil/]
Topsil's ultra-pure silicon is primarily used in highly demanding applications. Our products are based on many years of experience and significant investments in new technology, facilities, and equipment. They are used in applications including electric vehicles, high-

speed trains, power grids, wind turbines, and other green technologies, as well as more specialised applications within areas such as the medical and detector industries.
Our products and production processes are subject to extremely high quality standards. We work according to the **IATF 16949:2016 Automotive Quality Standard** and are ISO-certified within environmental management, energy management, and occupational health and safety.
Today, we are more than 240 employees, all based at our location in Frederikssund, Denmark, where our production operates 24/7. You will work alongside people with a wide range of backgrounds and professional skills. We appreciate a good laugh and have an informal working environment built on respect for the individual. At Topsil, you will be surrounded by dedicated colleagues in a workplace where work-life balance matters.
You can learn more about us at www.topsil.com and on LinkedIn.
